What We Provide

We are a specialized training organization delivering industry-aligned safety and technical training programs for the Wind and Solar energy sector. Our programs are designed to enhance workplace safety, technical competence, and operational efficiency, while meeting global standards such as GWO and site-specific requirements.

We offer customized, role-based, and practical training solutions tailored to technicians, engineers, supervisors, and site personnel.

Our Training Portfolio

- ✔ Mechanical Safety Trainings
- ✔ Customized Trainings
- ✔ GWO BTT (Basic Technical Training)
- ✔ Electrical Safety Trainings
- ✔ GWO Safety Trainings
- ✔ Basic Awareness Trainings

Our Training Portfolio delivers comprehensive, industry-aligned learning solutions for the wind and solar sector, covering customized trainings, GWO Safety, GWO Basic Technical Training (BTT), electrical safety, mechanical systems, electrical systems, and basic awareness programs. We design bespoke programs aligned with client-specific SOPs, risk profiles, turbine or plant requirements, and varying skill levels, delivered onsite or in classrooms. Our GWO Safety and BTT modules ensure globally recognized competence through hands-on training in working at heights, fire awareness, first aid, mechanical, electrical, hydraulic, and installation systems. Specialized electrical and mechanical technical trainings focus on hazard control, LOTO, safe isolation, preventive maintenance, troubleshooting, and system reliability across wind turbines, substations, and solar PV plants. Complementing these, our basic awareness trainings build safety culture, hazard awareness, and site readiness for all personnel—supporting EPCs, O&M companies, asset owners, contractors, and OEM partners in creating a safer, more skilled renewable workforce.

Our Process

We follow a structured and effective approach: Assess → Customize → Deliver → Evaluate. We begin by understanding your site conditions, risks, and skill requirements, customize training to your SOPs and assets, deliver engaging theory and hands-on sessions, and finally evaluate competence to ensure safety, compliance, and performance on site.

We certify and optimize by validating each participant's skills through recognized credentials and continuously enhancing their performance. Our approach ensures that teams are not only qualified but also efficient, confident, and prepared for safe operations in wind and solar environments.

Let's Work Together

Partner with us to build a safer, skilled, and future-ready renewable workforce. Together, we can deliver high-impact training, recognized certifications, and optimized performance for your team, ensuring efficiency and safety at every site.
